

Compassse Setup Guide

Ten minutes, two devices. September 2026.

Before you start

- Your Compassse account already exists. It was created when you checked out at [compasse.care](#). Nothing to sign up for in the app.
- You need two things: an iPhone in the family (that is the caregiver side), and an iPad that will live at your loved one's home, on their Wi-Fi. Any iPad from 2017 or later works, secondhand is fine.
- Have the email you used at checkout and your password. If you have not set a password yet, open the "Set your password" email that arrived right after your receipt.

Step 1. Your phone (2 minutes)

1. On your iPhone, open the App Store and install **Compassse**.
2. Open it and tap **Sign in**. Use the checkout email and your password.
3. You will land on your dashboard. This side is yours. Your loved one never sees it.

Step 2. The iPad (3 minutes)

1. On your phone, tap **Set up their tablet**. Type your loved one's first name. You get an **8-digit code**, good for 24 hours.
2. On the iPad, install **Compassse** from the App Store and open it.
3. Tap **Set up this tablet** and type the 8-digit code. That is all the iPad ever asks for. No email, no password.
4. The iPad turns into the board on its own: the time, the day, the date, a line from you, and what comes next. That is the whole screen your loved one sees.
5. In the iPad's Settings, set Auto-Lock to **Never** (Settings, Display & Brightness, Auto-Lock). The board is meant to stay on.

Step 3. The first reminder (3 minutes)

1. On your phone, add a medication or an event. Pick the time.

2. Tap the record button and say it the way you would say it in the kitchen. "Mom, it's time for your blood pressure pill." That recording is what plays on the board at that time.
3. Type the bottom line for today, for example "Shelly visits at 5pm". It shows on the board within seconds.

Step 4. Give the iPad a home (2 minutes)

- On a stand, plugged in, where your loved one naturally looks. The kitchen counter and the spot beside the chair are the two that work most often.
- Screen on. Volume about halfway. Wi-Fi connected.
- Tell them one thing: "If you want to ask it something, tap the bar at the bottom and talk." Cassi answers in her own calm voice, the same way every time.

What happens next

- If a reminder is not confirmed, your phone tells you. Quiet days stay quiet.
- If the iPad goes offline, your phone tells you that too.
- You can change anything from your phone, from anywhere. You never have to touch the iPad again.

Membership

Your first week is free, then \$29 a month. If Compasse is not right for your family in the first 30 days of paying, tell us and we refund it. Pause or cancel any time at **compasse.care/manage.html**, no call needed.

Questions

Email **hello@compasse.care**. We are two people, a mother and her son, and we read every note.

Compassse is a comfort and communication tool. It is not a medical device and it is not an emergency service.
